

Video at scale

In-app mobile video advertising offers marketers the opportunity to engage audiences at scale with high-impact branded content. These ads stream seamlessly at natural pauses during app usage, so the user experience isn't interrupted mid-stream or gated pre-roll.

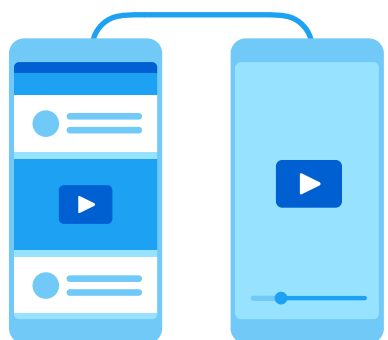

Video-enabled ad formats

User-initiated, non-skippable fullscreen video ads offer the **highest video completion rates** (avg. 93% on MoPub*), because users opt-in. Like all video ads on MoPub, sound autoplays unless the device is in silent mode.

Interstitial video ads are the most popular ad size among marketers because they **capture users' undivided attention** by filling the entire screen during a natural transition in the app, and offer additional branding in the end card.

Native video ads offer a **seamless user experience** by matching the look and feel of the app in which they appear. When a user clicks on a native ad, it expands to a full-screen video.

Video completion rate quartiles by ad format*

Last year in the US, time spent on mobile devices surpassed time spent watching TV. Meanwhile, **90% of time spent on mobile devices is in-app.**
